Quick action lever leg locks with 45° flip

Every telescopic arm that forms the central bracing system of the tripod is provided with two click-stop positions for easy tripod leveling.

The 475 is fully equipped: carrying strap attachment, bubble level, a non roll-back column with the original Manfrotto three faceted tube design and ultra secure locking knob. The crank handle on the geared column can also be folded away for transport.

PRO GEARED TRIPOD / Cat. No: 475

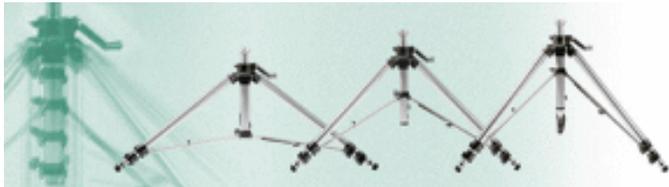

Equipment used in the present "digital era" requires a camera support system more stable and versatile than ever. Manfrotto geared tripods have always been the first choice of the professional photographer, whether in the studio or on location, for their medium and large format cameras.

All aluminum construction and unrivalled in stability, the **475 Pro Geared Tripod** incorporates a unique center brace strut system, reliable quick-action leg locks, non-rollback three faceted center column, spirit level and rubber/metal spiked feet.

Manfrotto has always been concerned with the balance between minimum and maximum height, tripod weight, and load capacity. The 475 is no exception. Designed by incorporating the best features of the 3033 and 3036 tripods, the 475 has added two important features. The new center brace system can be operated in a symmetric or asymmetric way. This allows the best of both worlds: speed by locking the braces so that all of the legs will be spread to the same angle, or by individually setting the angle of each leg for the ultimate in tripod positioning.

To avoid annoying delays in leveling the tripod, the telescopic center braces have been designed with two "click stop" positions that allow you to easily find the same spread angle on all three legs. The second improvement has been made to the leg locking system. The 475 incorporates the new Quick Action leg locks. These locks have an amazingly quick and secure locking range. All it takes is a 45° flip of the lever to lock and unlock each section.

SPECIFICATIONS	
Material	Aluminum
Column Type	Geared
Maximum Height with extended center column	74 inches
Maximum Height	63.8 inches
Minimum Height	17 inches
Closed Length	31.5 inches
Maximum Load Capacity	26.5 lbs
Levelling Bubble	Yes
Weight	9.5 lbs
List Price: US \$ 323.00	

Fast tripod set-up and independent leg control for leveling.

*List price is provided as a guide price only. For retail pricing and availability, please check with an authorized Bogen dealer.
